

Clocky manual pdf

I'm not robot!

Surprisingly, the Clocky has grown in popularity over the years since it was originally released, and has proven very popular among people who simply cannot stop hitting the snooze button each morning. It's therefore one of the best alarm clocks (opens in new tab) for those who have trouble getting up and need a little extra encouragement to throw back the duvet and face the day. How come? Well, the Clocky isn't your average alarm clock. Sure, it'll sit on your nightstand, but don't expect it to stay in the same spot for long once your morning alarm goes off. You get to snooze your alarm once. As soon as you've hit the snooze button, the Clocky runs away ready to sound its alarm for a second time. The idea is that you have to get out of bed to chase it to switch off the alarm. So no second snooze for you. Once you're up, you're up - try to fight the temptation to jump back into bed, no matter how comfy your mattress (opens in new tab) is. **Clocky review: Design**The Clocky is a battery operated (4 x AAA) alarm clock with one main trick: getting you out of bed, instead of letting you snooze until you're late for work. Beyond that it's a fairly basic alarm clock, with no radio or dual alarms, but that also makes it simple to use. We also like the easy-read display, which is backlit for nighttime use. That light also flashes when the Clocky starts rolling around on your floor. Those wheels will go over carpeted and hard floors, and don't leave any marks behind either. It's designed to be sat on your nightstand, but will tumble off after the first snooze. Don't worry, it's purpose built drop and roll, with wheels that actually form a buffer around the body of the clock, so you shouldn't have any concerns about it breaking. (Image credit: Clocky)The battery slot is on the bottom of the Clocky and secured by a small screw. That way, you don't have to worry about the batteries dislodging whenever it jumps off the nightstand and hits the floor. The Clocky is available in a seemingly endless array of colors, some of which are more expensive than others. Most of the matte colors cost \$39.99 RRP, while the flashier chrome versions cost \$49.99 RRP. **Clocky review: Performance**We've said above that the Clocky is very basic in terms of design and features compared to alarm clocks like the HomeLabs Sunrise Alarm Clock (opens in new tab). That's true, but it's also excellent in terms of getting you up. If constantly hitting the snooze button is your biggest wake-up issue, the Clocky will snap you out of it. We like how you can view the time in either the 12-hour or 24-hour format, and there's a single on/off button on the front of the Clocky. So, what about that one snooze you're allowed before it runs away? You access it via a big snooze bar on the top of the Clocky. If this is far too tempting for you and you want zero-snooze options instead, you can disable the snooze function altogether. No? Want to snooze just once? No worries - you'll get a maximum of ten minutes to sleep on. As soon as you hit snooze, Clocky runs away. It will then randomly roll around on your bedroom floor while it sounds its alarm. Eventually, it will stop rolling and keep sounding the alarm until you get out of bed and go get it. (Image credit: Clocky)The unit is built to handle a fall of about three feet. You can also disable the Clocky's wheels in case you want it to function like a non-moving alarm clock, but how will that get you out of bed faster each morning? Besides the movement, the alarm sound is also, er, unique. Instead of a standard single tone, the Clocky's alarm is a series of loud beeps at random tones. You can't control the volume on the alarm, but it's loud enough to wake most sleepers. Those randomized alarm tones also mean you won't grow used to the alarm and sleep through it either. **Should I buy the Clocky alarm clock?**We'd recommend the Clocky to any person who has trouble lifting their head off their pillow (opens in new tab) each morning to actually get up and start their day. Serial snoozing is very common but can be solved with a few lifestyle changes, your commitment to rise better each morning... and with a little help from the Clocky. While it has a three-month warranty, and is available in a host of colors to suit your bedroom decor, it's a basic alarm clock. There are far smarter, fancier clocks available these days. Even your smartphone (opens in new tab) or smart speaker (opens in new tab) will do a good job of sounding a morning alarm, but they just don't roll the way the Clocky does. **Today's best Clocky deals**Looking for more sleep content, or perhaps a new mattress? For the latter, take a look at our guide to the best Purple mattress deals (opens in new tab), the best Casper mattress deals (opens in new tab) or the best Saatva mattress discounts (opens in new tab) for sleep luxury for less. If anxious thoughts are affecting your slumber, learn how to stop anxiety ruining your sleep (opens in new tab). To reset your Clocky, follow these steps: Use new batteries: What brand of battery are you using? Please try using new lithium batteries with your Clocky. We have found it is best to use an American brand (Duracell or of Lithium batteries because of size variations with other brands. Check Polarity: Make sure the batteries are inserted with the correct polarity. Clocky's polarity is different from other devices. You may try removing and re-inserting the batteries. Check battery door: In addition, make sure that the battery door is screwed on tightly. Try Demo mode: Press the A and T buttons on the top simultaneously to operate the test mode. The wheels will start to move. **CLOCKY IS NOT RUNNING CORRECTLY** It is best to use new US branded Lithium batteries because of size variations with other brands. **CLOCKY'S WHEELS ARE NOT MOVING** Turn on Wheels: Make sure the wheels button is turned on (on face of clocky). When turned on, you will see a wheel icon on the display. Check Snooze Time: You can also check the snooze time on your Clocky. If your snooze time is set to 0, then your Clocky will run as soon as the alarm sounds. If it is set to 1-9 then the snooze button has to be pressed once and your Clocky will run after the number of minutes has passed. Try Demo mode: Press the 'a' and 't' buttons on the top simultaneously to operate the test mode. The wheels will start to move. **HOW SNOOZE BUTTON WORKS** Your snooze button is disabled by default. If your snooze time is set to 0, your Clocky will run away as soon as the alarm sounds and the snooze will be disabled. If your snooze time is set to 1 or any higher number, then you'll be able to hit snooze once and your Clocky will run after the set number of snooze minutes have passed. Please follow these steps to set your snooze time: Press the 'a' button twice rapidly. The snooze time is usually set to a 0 minute default. Press the 'm' button to choose your desired number of snooze minutes 0, 1, 2, etc can be chosen. If 0 is chosen, the snooze button will be disabled. To leave this mode, press the 'a' button again or just wait for the current time screen to resume. Also make sure that the wheels button is turned on (on face of Clocky). When turned on, a wheel icon will appear on the display. **CLOCKY'S WHEELS SEEM LOOSE** The wheels are made loose on purpose. They are engineered that way so that there is give when the unit falls to the floor. **CHANGING CLOCKY FROM 12-24 HOUR OR 24-12 HOUR FORMAT** Clocky can be set to display your time in either the 24-hour mode or the 12-hour mode. To set your Clocky to the 24-hour mode, press and hold the T button for 3 seconds. If you are currently in the 12-hour mode and your clock is set to one of the PM hours, when you press and hold the T button, you will see a change on the screen to the corresponding 24-hour time. If you are in the 12-hour mode and your clock is set to one of the AM hours, you will not see a change when you switch into 24-hour mode. Please make sure you are in one of the PM hours when you press and hold the T button. **WHERE CAN I FIND CLOCKY'S USER MANUAL?** Found HERE Yay! You get free 2 day standard shipping OMG! You've just qualified for another Clocky \$5 off! Add below See below for some helpful FAQs to clear up common questions. We also recommend reviewing Clocky's Instruction manual which was included in Clocky's box. Important warranty information is also included with the instruction manual. If your Clocky is sick, please contact us, explain the problem in some detail, and the steps you have taken to determine what's wrong. More often than not, we can solve your problem and get your Clocky running in no time. Download Clocky manual Setting up Clocky How do I turn Clocky on? + To reset your Clocky, follow these steps: Use new batteries: Only use new lithium batteries with your Clocky. It is best to use Duracell Lithium batteries because of size variations with other brands. We do not recommend Alkaline batteries. Check Polarity: Make sure the batteries are inserted with the correct polarity. Clocky's polarity is different from other devices. You may try removing and re-inserting the batteries. Check battery door: Ensure that the battery door is screwed on tightly. Try Demo mode: Press the A and T buttons on the top simultaneously to operate the test mode. The wheels will start to move. How do I ensure Clocky doesn't reset? + To ensure that Clocky's display does not reset: Use new batteries: Instead of Alkaline batteries, it is best to use Duracell Lithium batteries because of size variations with other brands. Check battery door: Ensure that the battery door is screwed on tightly. Try Demo mode: Test the movement (and let Clocky run off your nightstand) by using demo mode: Press the A and T buttons on the top simultaneously to operate the test mode. The wheels will start to move. How do I get Clocky to move? + Set up Alarm time: First, set the alarm time by pressing the 'a' button. Make sure that the alarm is turned on using the button on Clocky's face. You can confirm it is on by looking for the corresponding icon on the display. Note that by default, Clocky uses a 12-hour (AM / PM) display. Turn on Wheels: Make sure the wheels button is turned on. When turned on, you will see a wheel icon on the display. Check Snooze Time: Check the snooze time by pressing the 'a' button twice rapidly. If it is set to 0, then your Clocky will run as soon as the alarm sounds (no snoozing allowed!). If it is set to 1-9, you can snooze one time for 1-9 minutes. Your Clocky will not move until after you have pressed snooze once and those minutes have passed. Try Demo mode: Press the A and T buttons simultaneously to operate demo mode. The wheels will move. It is best to use new Duracell Lithium batteries because of size variations with other brands. You can see Clocky run quickly by testing demo mode. Press A + T buttons at the same time and the wheels will move. Press any button to stop demo mode. Your snooze button is disabled by default. That means that your Clocky will run away as soon as the alarm sounds. When you go into the snooze time screen, the snooze minutes will display as 0. However, your Clocky will allow you to snooze one time if you want to. If your snooze time is set to 1 or any higher number, then you can hit snooze once and your Clocky will run after the set number of snooze minutes have passed (1-9 minutes). Follow these steps to set your snooze time: Press the 'a' button twice rapidly. The snooze time is usually set to a 0 minute default. Press the 'm' button to choose your desired number of snooze minutes. 0, 1, 2, etc. can be chosen. If 0 is chosen, the snooze button will be disabled. To leave this mode, press the 'a' button again or just wait for the current time screen to resume. Important! Make sure that the wheels button is turned on if you want Clocky to move. When turned on, a wheel icon will appear on the display. Are Clocky's wheels supposed to be loose? + Clocky's wheels should be loose! They are engineered that way so that there is give when the unit falls to the floor. Can I change Clocky from a 12 to a 24-hour clock? + Clocky can be set to display your time in either the 24-hour mode or the 12-hour mode. To set your Clocky to the 24-hour mode, press and hold the T button for 3 seconds. If you are currently in 12-hour mode and the current time is in PM hours, then the screen will change to the corresponding 24-hour time. If you are in the 12-hour mode and your clock is set to one of the AM hours, you will not see a change when you switch into 24-hour mode. How fast can I get my Clocky? + We ship your Clocky within 1-3 days depending on the shipping option you choose on checkout! For orders outside the US, it can take 2-3 weeks. I'm in the US. Do I have to pay for shipping? + No, shipping is 100% free for US orders! I'm outside the US- how much do I have to pay for shipping? + It will depend on your countries legal import duties, but you can see the total on checkout! For some countries, you may have to pay shipping + import duties separately. You pay shipping on checkout and the shipping carrier will send you an invoice for the duties after you receive your order. We also sell in multiple Amazon marketplaces, so you're welcome to check our store and buy from there for better shipping options. We sell under CLOCKY on: MX, CA, IT, FR, ES, DE, UK, SW, NL, JP, AU, SG. Please reach out with any questions to team@clocky.com! I ordered Clocky. How do I know where he is? + You will receive two emails from us: one right after your order is placed, confirming everything is right and the another one with the tracking number. My Clocky has a problem/I changed my mind- how do I return him? + You should email us to team@clocky.com and we'll help you fix your Clocky or provide a free return label accordingly (as long as it's within our return period of 30 days). No, returns are free! You just have to email us at team@clocky.com for the return label within the return window. What is your warranty period? + 90 days My Clocky is past warranty but he is not working- what do I do? + You can always email us to team@clocky.com and we will always be available to help you troubleshoot your Clocky, even when it's past warranty period. USD
